ArcGIS {#Sec14} *ArcGIS* () is one of the best choices for 2D and 3D drawing of the infrastructure. You can use the built-in or your own extension. It is one of the most used software. Grading of infrastructure {#Sec15} ------------------------ According to Daud et al. ([@CR11]), in the context of water resources management, "the grading of an infrastructure system is the process of classifying segments of a network according to the performance of their hydrologic, hydromorphological and hydraulic functions (Mogilevsky and Brakha [@CR26]; Shamberger and Douglas [@CR34]; Zang and Cengel [@CR44]). The most commonly used method for the definition of hydrologic and hydrogeomorphic (H/H) units of a catchment, is the generalized six-unit or 'graded-flow' scheme (Lilley and Walker [@CR24]). H/H units are used to quantify the hydraulic role of a drainage network in providing the water and sediment loads 82157476af
