. Maptool Review – Ultimate Map Software Review – Whether you are an architect, land surveyor, civil engineer, or other geomatics professionals, Maptool is the best software for creating, viewing, and analyzing geospatial data. Some of the things that make Maptool so powerful is its ability to visualize 3D models in Google Earth, ability to print custom maps, and its ability to interpret and transfer all types of geospatial data. Let's take a closer look at what Maptool is, how it works, how you can get it, and how it can save your time and increase your productivity. What is Maptool? Maptool is an advanced and powerful software that can be used to review projects, store and manage data. The program is extremely easy to use. Even a novice can get it done in a few minutes. You can easily use it to create a 3D interactive model, and that model can be viewed in Google Earth. Once you have created your model, you can export it in different formats such as DWG, SHP, KML, and also in the real world, such as PDF. If you want to display your project in a location, then you can print it. The software can also help you transfer your project to other programs. Some of the programs that you can use to transfer and print your project are: Google Earth, Autodesk Revit, Google SketchUp, Google Earth Pro, and MapInfo. With this software you can also view, edit and create data in a quick and easy manner. With this you can perform the following functions:

- Create and edit CAD, GIS and map files
- Import/Excel/CSV/JSON and clean source data for uploading into CAD, GIS or Map files
- Export CAD, GIS and map files to Google Earth or any other applications
- Import and export maps, data, symbols and overlays for accurate and up to date mapping projects.
- GPS data management with precise support for Garmin devices
- Imports and exports 3D Views to Autodesk
